Full HD video
3×PIR sensor 120°

EVOLVEO StrongVision 2GB

Camera trap with GSM, MMS + 8GB SD card

This compact and modern camera allows you to take photos or record a video with sound anywhere you cannot use a classic camera system. The photos will be sent to your mobile phone as MMS, or to your email. You can easily monitor the movement around your house, cottage, garden house, business, warehouse, construction site or watch wildlife in remote locations.

20Mpix photography and fullHD video

The camera can take photos in up to 20mpix resolution and record a video in 1080p/30fps resolution, all in both day and night mode. In the photo mode, the camera can take the photo in record time after the motion is detected.

EVOLVEO Mail server

For the 2GB model we have prepared an Evolveo Mail service, so you can easily send the captured images. In the EVOLVEO config application, all you have to do is enter the email address to which the captured photo will be sent, and that's it, no passwords or usernames. Everything takes place on secure communication between the photo trap and our Czech mail server.

Package content

- EVOLVEO StrongVision 2GB
- Antenna
- 8GB SD card
- SIM card removing tool
- Fastening strap
- USB cable
- User manual

Specifications:

- Sending MMS/emails to several numbers or addresses at once
